

MADACC Adoptable: Ashley and Dewey

Ashley and Dewey would both love nothing more in the world than a happy home. Ashley is a 4 year old sweet girl. Dewey is a gentle 6 year old. They both love people and lots of attention. If you would love a constant companion, come meet them.

Both Dewey and Ashley have feline immunodeficiency virus (FIV). FIV is an immune disorder, one that is *not* contagious to humans or other animals, that could affect their health as they get older. They both should love long and happy lives if they are taken care of and kept indoors.
